STEREOGRAPHIC PROJECTION

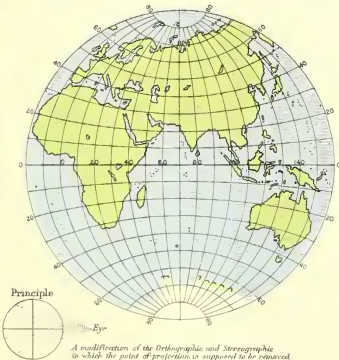

The Plane of Projection is centre of Earth, point of projection supposed to be on surface of sphere opposite to the one to be delineated.

ORTHOGRAPHIC PROJECTION

The Plane of Projection is centre of Earth, the eye or point of projection supposed to be at infinite distance so that lines of projection are all parallel.

EQUIDISTANT OR GLOBULAR PROJECTION

A modification of the Orthographic and Stereographic, in which the point of projection is supposed to be removed to a point outside of the opposite surface of the sphere.

POLAR PROJECTIONS

The Gnomonic Projection cannot be made to include the whole hemisphere. The Stereographic and Globular Projections can be extended to include more than the hemisphere.

MERCATOR'S PROJECTION

The Plane of Projection is the surface of an imaginary cylinder surrounding the globe and touching its surface at the equator. At the equator its scale agrees with the globe but as each parallel of latitude becomes a great circle equal to the equator the scale increases as we go north and south. The latitude is however increased in same proportion as the longitude. Mercator's projection is the only one which gives the true direction of one point in relation to another and is therefore most used for the purposes of Navigation.

GALL'S STEREOGRAPHIC PROJECTION

This is another cylindrical Projection but the cylinder, instead of touching the sphere only at the equator as in Mercator's, is supposed to be made into its surface so that it cuts its surface half way between the equator and the poles, and then coincides with the two parallels of 45° N. and S. Lat. The parallels are projected stereographically.

SANSON'S (SINUSOIDAL) PROJECTION

The parallels are drawn at their true distance from the equator and along each of these correct distances are measured through which the meridians are drawn. The projection is obviously equal area.

MOLLWEIDE'S HOMOLOGRAPHIC PROJECTION

This is an equal area projection. The parallels (only on the map) are made to equal the world hemisphere. Parallels are drawn that the same distance to the axis of the circle as the circular zone on the earth bears to the hemisphere. The meridians are ellipses cutting the parallels at equal distances.

CONIC PROJECTION WITH ONE STANDARD PARALLEL

The Plane of the Projection is the surface of an imaginary cone imposed on the Sphere and touching its surface along the parallel of 45°. P, P' the parallel where the cone touches with the sphere. Distances measured along that parallel on the map are absolutely correct as they exactly coincide with the globe. But the scale is distorted to the north and south of tangential parallel according to distance from it.

CONIC PROJECTION WITH TWO STANDARD PARALLELS

In this case the cone is imposed to cut the sphere along two parallels PP' and P'P'' which however are plotted their true distance apart (i.e. the distance along the arc P'P'' not the chord). The map has therefore the advantage of coinciding with the globe along two parallels instead of one as in the Simple Conic.

VAN DER GRINTEN'S PROJECTION

BONNE'S PROJECTION

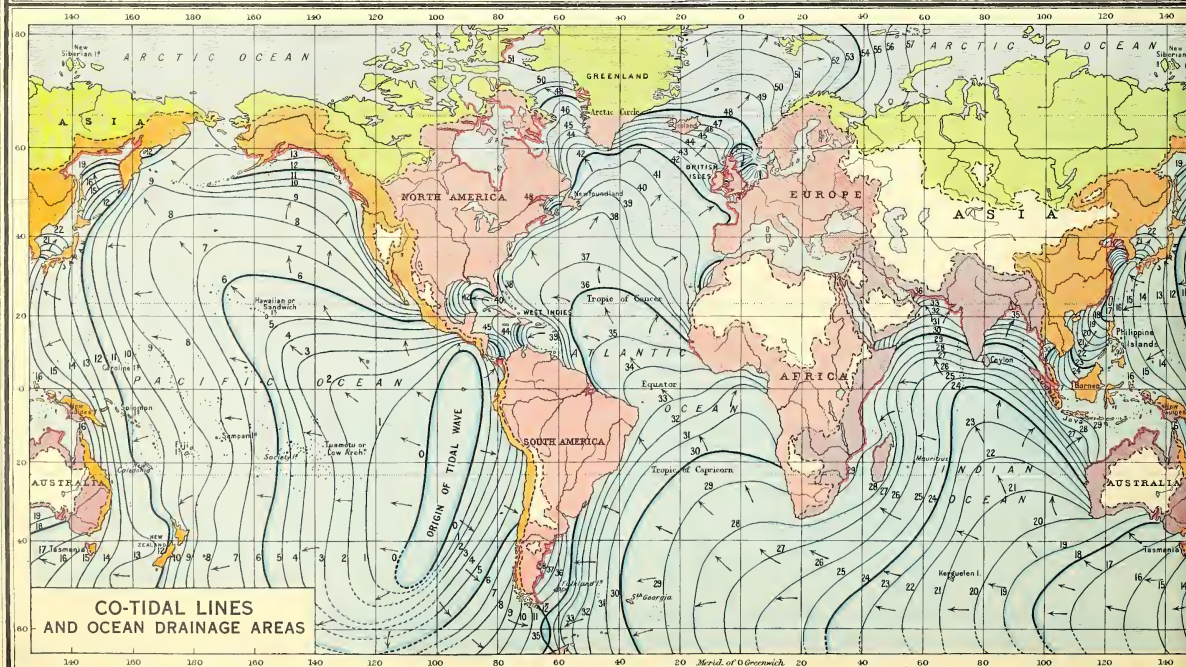

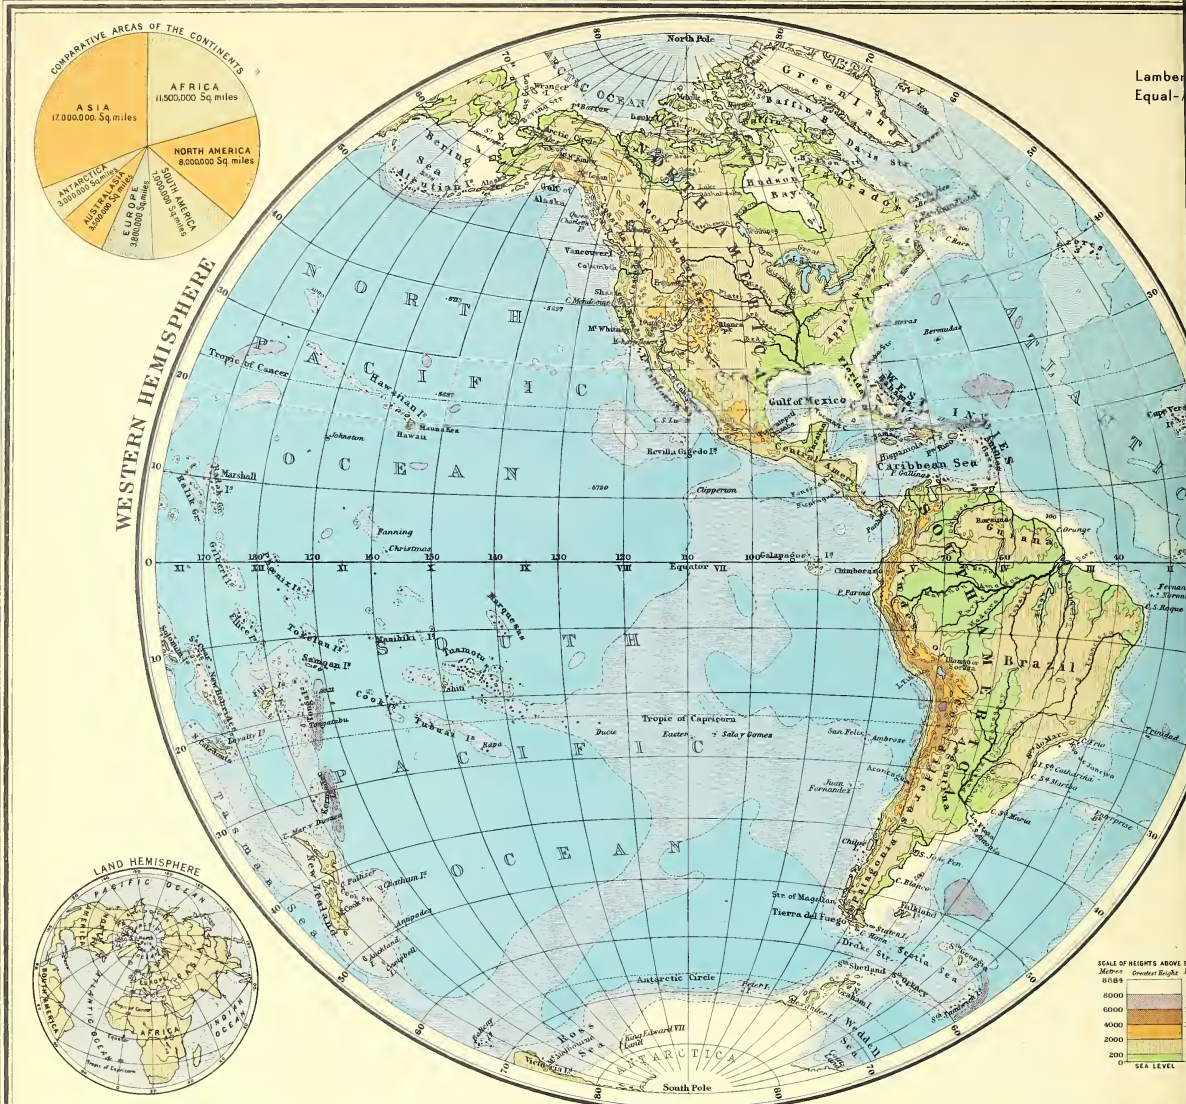

This is a development of the Conic Projection and differs from the pure Conic in that instead of distances being correctly measured along one parallel, true distances are measured along each parallel.

This projection strikes a mean between Mercator's and Mollweide's. It has neither the great exaggeration of land areas towards the Pole of the former, nor the excessive angular distortion of the latter.

COVERING OF A 2 1/2 INCH WORLD GLOBE IN GORES

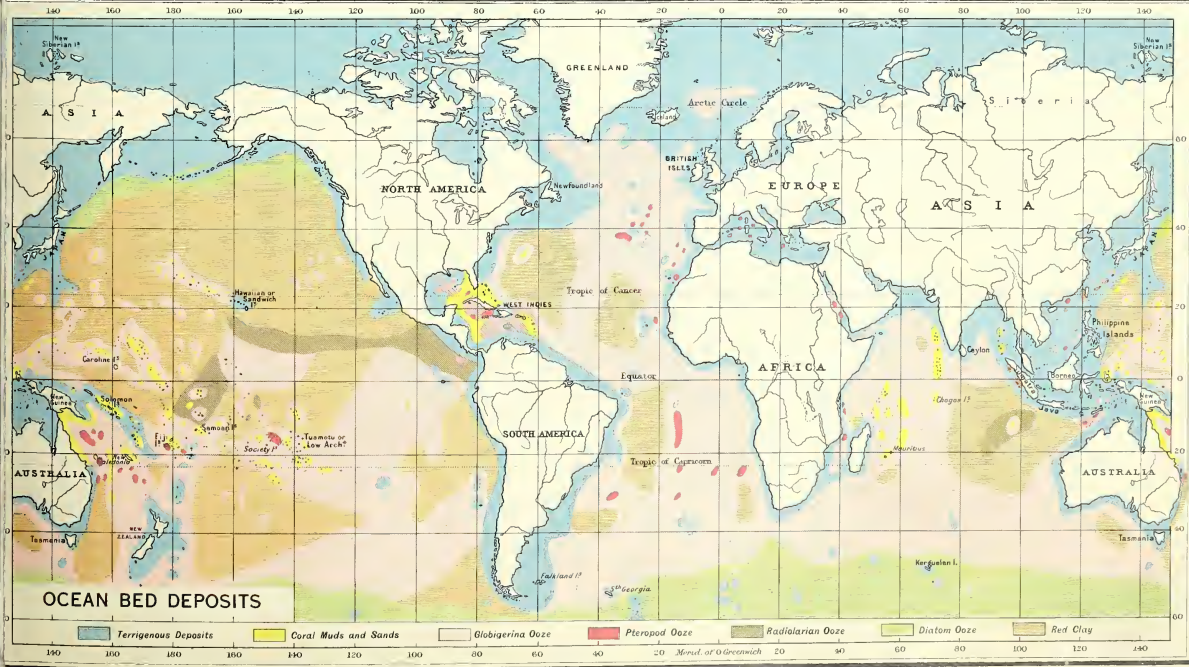

Note.—These gores are designed to be cut out and mounted on a Globe 2 1/2 inches in diameter which they will exactly cover.

The Figures on the Co-Tidal Lines denote the total number of hours from the starting point of the tide in the South-Eastern Pacific. Coasts with a Tidal Range of Ten Feet and over shown thus

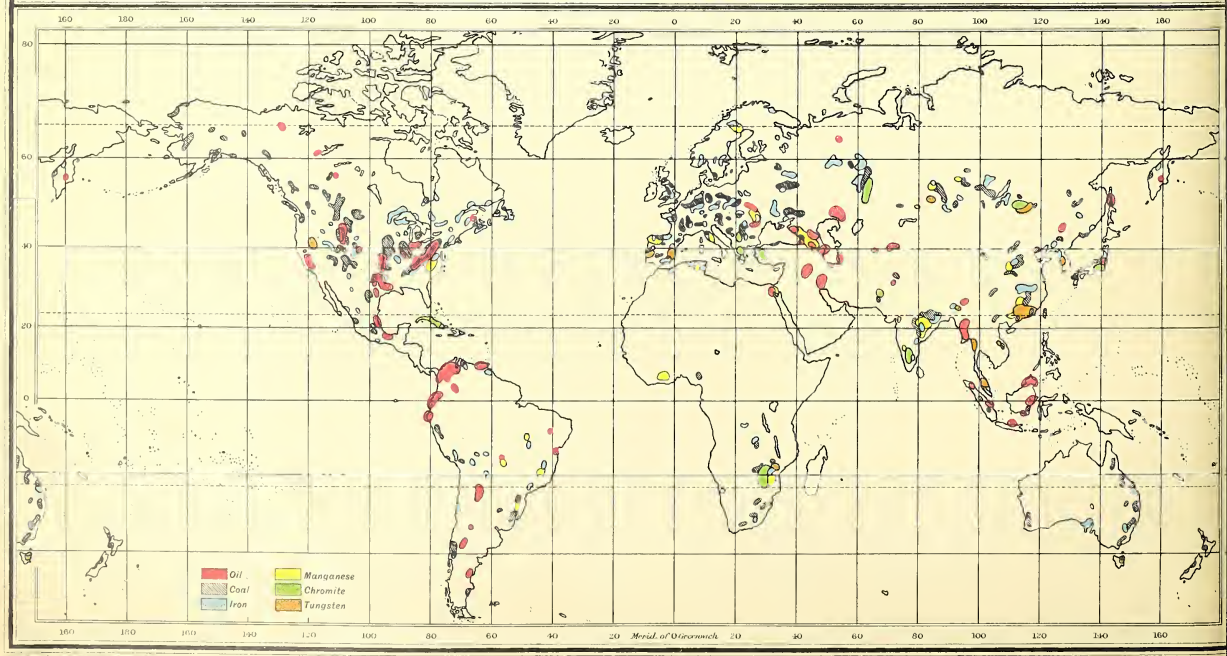

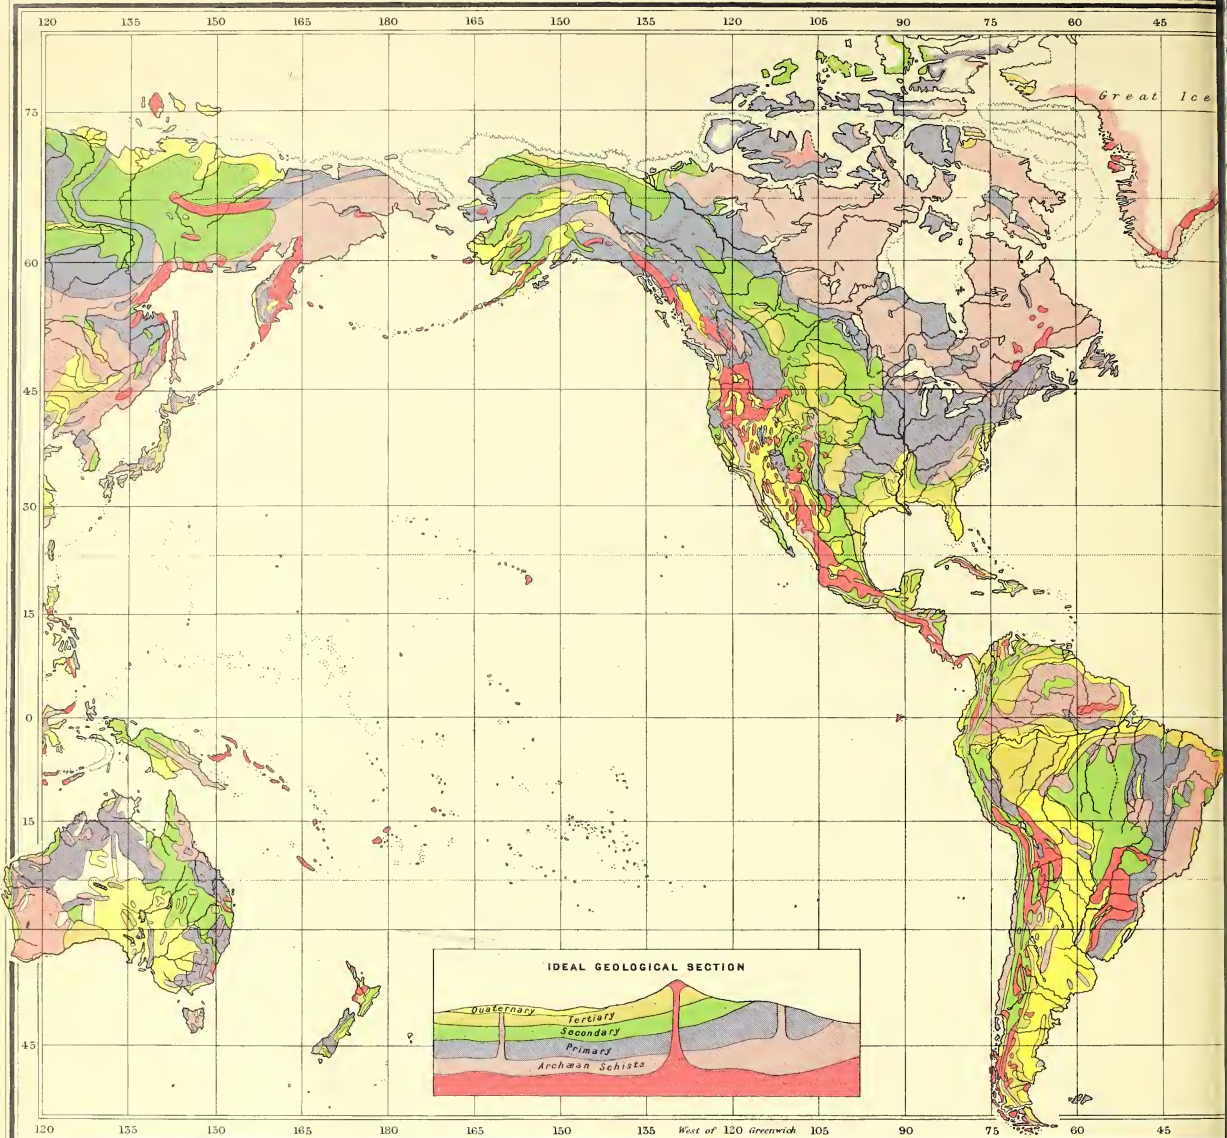

The Drainage Areas are coloured according to the Oceans into which they drain. Inland Drainage Areas shown White

Note to Ocean Currents

Warm Currents Cold Currents
 direction of the currents is shown by the arrows.
 thickness of the arrows indicates by the number of strokes
 mean speed of the water drift in an hour.
 thick strokes above indicate the number of nautical miles.
 thin strokes below indicate the number of quarters of a mile.
 → 1 mile → 2 miles → 3 miles
 → 1/4 → 2/4 → 3/4

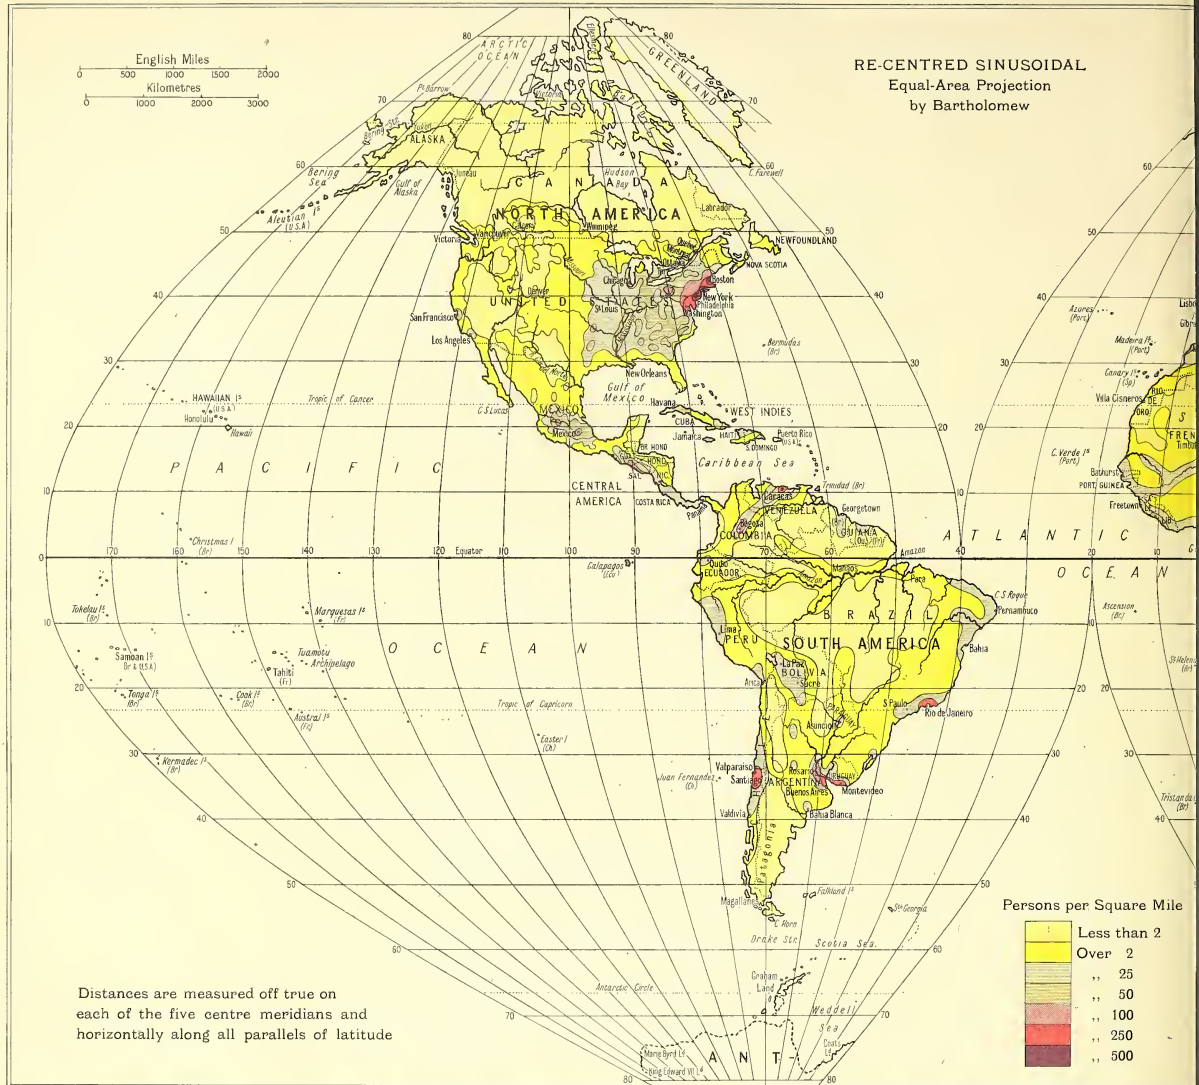

Note to Monsoon Drifts

In the Indian Ocean, the China Sea and the West Coast of Mexico and Central America, the currents change with the Monsoons. The simple arrows → show the S.W. and S.E. Monsoon Drift during the Northern Summer. The arrows marked thus ← → show the N.W. and N.E. Monsoon Drift during the Northern Winter. Limit of Floating Ice Limit of Pack Ice

GENERAL INDEX

ABBREVIATIONS

Arch.	=	Archipelago.	Div.	=	Division.	L., Lake, Loch, Lough, Lago, Lac	Ra.	=	Range.		
B.	=	Bay, Bahia.	E.	=	East.	Mt.	=	Mount, Mountain.	S.	=	South.
Can.	=	Canal.	Ft.	=	Fort.	N.	=	North.	Ser.	=	Serra, Sierra.
Cas.	=	Castle.	G.	=	Gulf, Golfo.	N.-W.F.	=	North-West Frontier.	Set.	=	Settlement.
Chan.	=	Channel.	Gov.	=	Government.	P.	=	Pass.	Str.	=	Strait.
Co.	=	County.	Gr.	=	Great.	Pen.	=	Peninsula.	Ter.	=	Territory.
Cor.	=	Cordillera.	Harb.	=	Harbour.	Plat.	=	Plateau.	U.S.	=	United States.
Cr.	=	Creek.	Hd.	=	Head.	Prov.	=	Province.	Val.	=	Valley.
Dep.	=	Department.	I. Is.	=	Island, Islands.	Pt.	=	Point.	Vol.	=	Volcano.
Dist.	=	District.	junc.	=	Junction.	R.	=	River, Rio.	W.	=	West, Western.

Note.—The Latitudes and Longitudes are in many cases only approximate, but they are sufficiently close to allow of the places being easily located on the maps.
